

Product Information and Traditional & Alternative Uses

Clove has had a long history of being used for its effects on inflammation; however, there has not been much scientific validation to this statement until recently. The Journal of Immunotoxicology published the first ever study proving that the eugenol in clove oil is indeed a potent anti-inflammatory. Clove oil should be mixed with a carrier oil for most topical applications and only used for short periods at low amounts of up to two weeks internally.
